ACT NOW WEANING

Study Status Recruiting

NCT # 04214834

<https://clinicaltrials.gov/ct2/show/NCT04214834>

Study Purpose

The goal of the ACT NOW Weaning Study is to help clinicians safely reduce doses of morphine or methadone prescribed to infants with neonatal opioid withdrawal syndrome (NOWS).

The Trial to Shorten Pharmacologic Treatment of Newborns with Neonatal Opioid Withdrawal Syndrome, compares two approaches for weaning infants from morphine or methadone - which clinicians often prescribe for several days to calm babies who have Neonatal Opioid Withdrawal Syndrome. The ACT NOW Weaning clinical trial will enroll approximately 500 infants across 15 states.
