

VDORA 1 Vitamin D Oral Replacement in Asthma

Study Purpose

Low levels of Vitamin D have been recognized as a common factor in children who have asthma and have weight that is higher than what is considered a healthy weight for their height.

The VDORA1 research study will help us learn how much Vitamin D supplement a child needs to take in order to achieve a certain level in his or her blood. What we learn in this study may help doctors understand more about the possible relationship between Vitamin D levels and asthma symptoms in children who have BMI greater than or equal to the 85th percentile.

NCT: 03686150 Study Status: Active
